The field of electrical engineering plays a major role in everyone's life. Electrical engineers are involved in research, development, design, production and operation of a wide variety of products ranging from devices as small as a billionth of a meter, to systems of communication networks spanning large geographical areas and serving millions of people. Electrical engineering efforts show up in such products and processes as personal computers, tablets, cell phones, high-definition television, mobile radios, environmental control systems, digital signal processing, communications and computer networks, and integrated circuit chip design. In health care facilities, electrical engineering technology is found within sophisticated instruments for monitoring patient status, extensive computerized data handling, CAT scan and MRI machines and fiber optic imaging devices for internal examinations. In transportation systems, applications include smart traffic control signals for automobiles, GPS, navigation systems for aircraft and ships and a variety of electronic sensors as well as microprocessors for automotive engine control. Career opportunities exist in the areas of basic research, product design, software engineering, project engineering, engineering management, engineering consultancy, technical sales and many others.

The Electrical Engineering program prepares graduates either for direct entry into a career in engineering or for graduate study and is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. The curriculum provides a strong background in the fundamentals of electrical engineering and senior level coursework delivers in-depth knowledge in the important areas of Electronics, Communications and Networks, Computer Engineering, and Controls and robotics. The program culminates with a senior design project in the final year, where students work in teams to design and build a physical, functional device relying on knowledge and experience gained through the theoretical and laboratory based coursework.

Recent George Mason electrical engineering graduates have gone on to pursue graduate studies at highly competitive institutions such as MIT, Stanford, Cornell and California Institute of Technology, and as working engineers at high technology companies and government agencies such as BAE Systems, Boeing, General Electric, General Dynamics, IBM, INTEL, Lockheed-Martin, MITRE, NASA, Naval Research Lab, Northrop Grumman, Orbital Sciences and Raytheon.

Admission Requirements
Admission to George Mason is competitive in that the number of qualified candidates for admission generally exceeds the number of new students who can be accommodated. Each candidate who presents sufficient admission qualifications is reviewed in the context of other qualified applicants. An offer of admission is valid only for the semester for which the student applied. Application for undergraduate admission can be made online at George Mason’s website http://admissions.gmu.edu. The Office of Admissions can also provide forms upon request.

Students who have graduated from high school and subsequently attempted course work at a college or university are considered transfer applicants. Those who wish to apply for transfer admission should visit http://admissions.gmu.edu/transfer/ for more information.

Degree Requirements
The electrical engineering curriculum requires 121 total credit hours, which can be completed within eight semesters. At least 45 semester hours of the degree requirements must be level 300 or above. Students may wish to consider an extra semester or two for the purpose of lightening the course load (particularly for those with part-time employment); participating in Cooperative Education or work-study (with local industry); achieving a double major (for example with computer engineering, physics, mathematics or computer science); or adding a minor such as mechanical engineering, business, computer science, mathematics or physics.
## Sample Schedule for Undergraduate Electrical Engineering Majors

<table>
<thead>
<tr>
<th>Semester</th>
<th>Course Code</th>
<th>Course Title</th>

</tbody>
</table>

*Mason Core Categories: One course from each: Oral Communication, ENGH101, Arts, Global Understanding, Literature, Western Civilization/World History. List of approved courses is available on [http://catalog.gmu.edu/mason-core](http://catalog.gmu.edu/mason-core). VSE students do not need to seek out Science, Math, and IT categories as they are built into the major curriculum.

**ENGH 101 and Mason Core-Literature must be completed before taking ENGH 302.**

***Note that ECE 285/ ECE 286 courses taken at Mason prior to fall 2013 or transferred to Mason prior to fall 2014 do NOT meet the circuit analysis requirement. Students who fit in either category should contact the department as soon as possible to discuss their options.***

- The ECE technical electives should be selected from the department’s list of approved courses.
- While students are encouraged to follow this schedule to ensure that course pre-requisites are met, please come and see the ECE Dept Academic Advisor for alternate schedules.
